

MULTIMEDIA UNIVERSITY

FINAL EXAMINATION

TRIMESTER 3, 2016 / 2017 SESSION

DEC5028 – MACROECONOMICS

(All sections / Groups)

31 May 2017 2.30PM – 4.30PM (2 Hours)

INSTRUCTIONS TO STUDENT

- 1. This question paper consists of 8 pages with 3 sections.
- 2. Answer ALL questions for sections A, B and C.
- 3. Answers for section A should be shaded on the OMR sheet provided.
- 4. For sections B and C, please write your answers in the answer booklet provided.

AAW

SECTION A: MULTIPLE CHOICE QUESTIONS

Each question consists of 2 marks. Answers for this section should be shaded on the OMR sheet provided.

1.	Whi	ch of the following is NOT macroeconomics major concern?
	Α.	Business cycle.
		Unemployment.
		Output growth.
		Inflation.
		· ·
2.	The	three market arenas consists of
	I.	Labor market
	II.	Goods and services market
	III.	Black market
	IV.	Money market
	Α.	I, II and III
	B.	I, III and IV
	C.	I, II and IV
	D.	II, III and IV
3.		nsfer payment is a cash payment made by to who do not
	sup	ply goods, services, or labor in exchange for these payments.
	A.	the government; firms
	B.	firms; the government
		the government; household
	D.	household; government
4.	Αg	government policy concerning tax and government spending is called as
	A.	monetary policy
	B.	fiscal policy
	C.	education policy
	D.	internal policy
5.	***	is a phrase used to refer to the government's role in regulating inflation and
	un	employment.
	A.	Fine-tuning
	B.	Stagflation
	C.	The great depression
	D.

6.	Which of the following is determined in the labor market?
	A. Price of goods and services.
	B. Wage rates.
	C. Interest rates.
	D. Exchange rates.
7.	Which of the following is the function of money?
	A. Unit of account.
	B. Liquidity.
	C. Fiat money.
	D. Commodity money.
8.	The decrease in the value of money that occurs when its supply is increased rapidly is known as
	KIIOWII do
	A. monetary policy
	B. required reserve
	C. money multiplier
	D. currency debasement
9.	What is the tool used by Bank Negara Malaysia to control money supply and interest rates?
	A. Open market operation.
	B. T-account.
	C. Official settlement account.
	D. Balance of payment.
10.	When Fatihah decided to keep her RM 1,000,000 under the mattress, she is directly controlling the
	A. Monetary base
	B. Desired reserves
	C. Desired currency holding
	D. Money multiplier
11.	Kayla transfers RM500 from her saving account to her checking account. This transaction
	will
	A. not change M1 and decrease M2
	B. increase M1 and not change M2
	C. increase both M1 and M2
	D. decrease both M1 and M2
	Continued
AAW	2/8

A. increase B. decrease C. not change D. moves along the supply curve 13. The long-run aggregate supply (LAS) is vertical at potential GDP because A. potential GDP is independent of the price level B. the quantity of real GDP supplied has negative relationship with the price level C. the wage rate increases D. the price of raw materials decreases 14. Which of the following will affect the household buying plan? A. The increase in the price of raw materials. B. Potential GDP increases. C. Decrease in cost of production. D. Household expectation of future income increases. 15. A full-employment equilibrium means that A. real GDP equals potential GDP B. real GDP exceeds real GDP C. potential GDP exceeds real GDP D. real GDP equals aggregate demand 16. An inflation that starts with an increase in costs is called A. demand-pull inflation B. hyperinflation C. cost-push inflation D. deflation 17. If a country have larger imports than exports, then the country's aggregate demand will likely to A. remain constant B. move along the curve C. increase D. decrease	DEC50	28	MACROECONOMICS 31 MAY 2017
B. decrease C. not change D. moves along the supply curve 13. An inflation that starts with an increase in costs is called A. demand-pull inflation B. hyperinflation C. cost-push inflation D. deflation 17. If a country have larger imports than exports, then the country's aggregate demand will likely to A. remain constant B. move along the curve C. increase D. decrease		D.	the price of raw materials decreases
B. Potential GDP increases. C. Decrease in cost of production. D. Household expectation of future income increases. 15. A full-employment equilibrium means that A. real GDP equals potential GDP B. real GDP exceeds potential GDP C. potential GDP exceeds real GDP D. real GDP equals aggregate demand 16. An inflation that starts with an increase in costs is called A. demand-pull inflation B. hyperinflation C. cost-push inflation D. deflation 17. If a country have larger imports than exports, then the country's aggregate demand will likely to A. remain constant B. move along the curve C. increase D. decrease	14.	Wh	nich of the following will affect the household buying plan?
C. Decrease in cost of production. D. Household expectation of future income increases. 15. A full-employment equilibrium means that A. real GDP equals potential GDP B. real GDP exceeds potential GDP C. potential GDP exceeds real GDP D. real GDP equals aggregate demand 16. An inflation that starts with an increase in costs is called A. demand-pull inflation B. hyperinflation C. cost-push inflation D. deflation 17. If a country have larger imports than exports, then the country's aggregate demand will likely to A. remain constant B. move along the curve C. increase D. decrease		A.	The increase in the price of raw materials.
D. Household expectation of future income increases. 15. A full-employment equilibrium means that A. real GDP equals potential GDP B. real GDP exceeds potential GDP C. potential GDP exceeds real GDP D. real GDP equals aggregate demand 16. An inflation that starts with an increase in costs is called A. demand-pull inflation B. hyperinflation C. cost-push inflation D. deflation 17. If a country have larger imports than exports, then the country's aggregate demand will likely to A. remain constant B. move along the curve C. increase D. decrease		B.	Potential GDP increases.
 A full-employment equilibrium means that A. real GDP equals potential GDP B. real GDP exceeds potential GDP C. potential GDP exceeds real GDP D. real GDP equals aggregate demand 16. An inflation that starts with an increase in costs is called A. demand-pull inflation B. hyperinflation C. cost-push inflation D. deflation 17. If a country have larger imports than exports, then the country's aggregate demand will likely to A. remain constant B. move along the curve C. increase D. decrease 		C.	
A. real GDP equals potential GDP B. real GDP exceeds potential GDP C. potential GDP exceeds real GDP D. real GDP equals aggregate demand 16. An inflation that starts with an increase in costs is called A. demand-pull inflation B. hyperinflation C. cost-push inflation D. deflation 17. If a country have larger imports than exports, then the country's aggregate demand will likely to A. remain constant B. move along the curve C. increase D. decrease		D.	Household expectation of future income increases.
B. real GDP exceeds potential GDP C. potential GDP exceeds real GDP D. real GDP equals aggregate demand 16. An inflation that starts with an increase in costs is called A. demand-pull inflation B. hyperinflation C. cost-push inflation D. deflation 17. If a country have larger imports than exports, then the country's aggregate demand will likely to A. remain constant B. move along the curve C. increase D. decrease	15.	A i	full-employment equilibrium means that
C. potential GDP exceeds real GDP D. real GDP equals aggregate demand 16. An inflation that starts with an increase in costs is called A. demand-pull inflation B. hyperinflation C. cost-push inflation D. deflation 17. If a country have larger imports than exports, then the country's aggregate demand will likely to A. remain constant B. move along the curve C. increase D. decrease		A.	real GDP equals potential GDP
D. real GDP equals aggregate demand 16. An inflation that starts with an increase in costs is called A. demand-pull inflation B. hyperinflation C. cost-push inflation D. deflation 17. If a country have larger imports than exports, then the country's aggregate demand will likely to A. remain constant B. move along the curve C. increase D. decrease		B.	real GDP exceeds potential GDP
 An inflation that starts with an increase in costs is called A. demand-pull inflation B. hyperinflation C. cost-push inflation D. deflation 17. If a country have larger imports than exports, then the country's aggregate demand will likely to A. remain constant B. move along the curve C. increase D. decrease 		C.	potential GDP exceeds real GDP
 A. demand-pull inflation B. hyperinflation C. cost-push inflation D. deflation 17. If a country have larger imports than exports, then the country's aggregate demand will likely to A. remain constant B. move along the curve C. increase D. decrease 		D.	real GDP equals aggregate demand
 B. hyperinflation C. cost-push inflation D. deflation 17. If a country have larger imports than exports, then the country's aggregate demand will likely to A. remain constant B. move along the curve C. increase D. decrease 	16.	Ar	inflation that starts with an increase in costs is called
 C. cost-push inflation D. deflation 17. If a country have larger imports than exports, then the country's aggregate demand will likely to A. remain constant B. move along the curve C. increase D. decrease 		A.	demand-pull inflation
 D. deflation 17. If a country have larger imports than exports, then the country's aggregate demand will likely to A. remain constant B. move along the curve C. increase D. decrease 		B.	hyperinflation
 17. If a country have larger imports than exports, then the country's aggregate demand will likely to A. remain constant B. move along the curve C. increase D. decrease 		C.	cost-push inflation
A. remain constant B. move along the curve C. increase D. decrease		D.	deflation
A. remain constant B. move along the curve C. increase D. decrease	17.	If	a country have larger imports than exports, then the country's aggregate demand will
B. move along the curve C. increase D. decrease		lik	tely to
C. increase D. decrease		A.	remain constant
D. decrease		B.	move along the curve
		C.	increase

SECTION B: CASE STUDY

<u>Please refer to the article below to answer the questions. Answers for this section should</u> be written in the answer booklet provided.

Higher unemployment rate likely to be the norm

The number of workers retrenched per year is estimated at between 40,000 and 60,000. The unemployment rate is 3.5% or about 550,000. By and large, it essentially boils down to companies closing down due to various reasons such as adapting to new technologies that require less human capital.

One of the reasons for the Employment Insurance Scheme (EIS) is that agencies anticipate a growing number of working adults being put out of a job. Under the EIS, they would get some form of financial compensation for six months. The government believes the insurance scheme has been proven to act as an "economic stabiliser" and helped sustain the economy in countries that have adopted it, especially during a crisis. The scheme will also help improve the labour market's efficiency by making companies more competitive, which will result in increased productivity.

Malaysia is not alone in wanting to move its economy up the value chain from manufacturing to a services-oriented economy. In the process, there will be increasing use of machines to replace human skills. Human capital will be less important. It started with factory production floors and now has gone on to even managing money.

Eventually, as companies strive to be more competitive and reduce cost in the process, more people will be without jobs. The unemployment rate should go up.

(The article is adapted from: The Star Online, 15th April 2017)

- a) What is the main reason for higher numbers of workers retrenched? (2 marks)
- b) Identify THREE (3) benefits of the Employment Insurance Scheme (EIS). (6 marks)
- "In the process, there will be increasing use of machines to replace human skills.

 Human capital will be less important. It started with factory production floors and now has gone on to even managing money."

In your opinion, what is the type of unemployment for statement above? (2 marks)

SECTION C: STRUCTURED QUESTIONS

Answers for this section should be written in the answer booklet provided.

QUESTION 1

a)

Items	RM (Millions)
Durable goods	550
Employees compensation	780
Export	80
Federal Government Expenditure	300
Import	60
Inventory	50
Local Government Expenditure	170
Non-durable goods	250
Non-Residential Investments	480
Personal Income Tax	70
Proprietors' Income	150
Residential Investments	450
Services	90
State Government Expenditure	260

Table 1

Calculate the country's Gross Domestic Product (GDP) using expenditure approach. (6 marks)

b)

	2015 (Base year)		2016	
Products	Price per Kg	Q	Price per Kg	Q
Cotton	RM50	1000	RM80	800
Corn	RM15	500	RM20	350

Table 2

Supposed a country only produced cottons and coms. Based on the table above, calculate:

i) Nominal GDP for 2015 and 2016.

(6 marks)

ii) Real GDP for 2015 and 2016.

(6 marks)

iii) GDP deflator for 2016.

(2 marks)

QUESTION 2

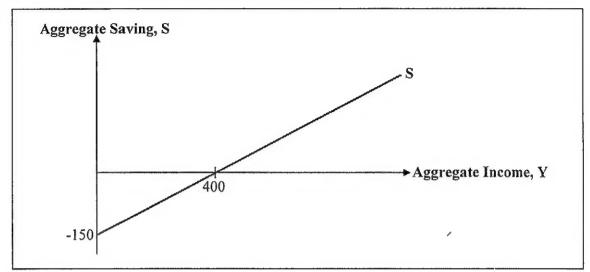

Figure 1

Aggregate Output (Income)	Aggregate Consumption, (C)	Aggregate Investment, (I)	Government Spending, (G)	Aggregate Expenditure, (AE)
50		50	70	
100		50	70	
150		50	70
